

COMBI SLAB – TANK BUND SLAB

The Dramix® Combi Slab solution enabled the construction of the whole slab completely joint free using one layer of mesh plus Dramix®.

This project required a joint free watertight slab to support tanks containing water and fertilizer. This required a crack width calculation of 0.2mm.

Technical solution

- Fibre Type – DRAMIX®
- Additional Reinforcement – top layer of mesh
- Constructed completely joint free
- C30/37 concrete
- Contractor –: South Roads

Benefits

- Liquid tight joint free slab
- Reduced long term maintenance
- Improved durability and elimination of expensive watertight joints
