

ANOTHER SLAB-ON-CMC'S AT BRISBANE AIRPORT

Aramex are building a brand new 25,000m² facility at Brisbane Airport, ready to be filled with endless parcels for handling and distribution. As standard for the geotechnical conditions in this area, ground improvement was required and CMC's were the chosen method once again. Dramix steel fibres have become the obvious solution for these types of projects over the past years with their ability to accommodate the hogging and sagging moments induced by this method of ground improvement. And SETC have, again, been able to produce extremely high-quality burnished slabs for Tomkins Commercial and Industrial, one of BAC's favorite builders. Another great outcome by a great overall team.

Developer: – Aramex

Builders: – Tomkins Commercial and Industrial

Engineers: – Northrop Consulting

Premix Suppliers: – Holcim Concrete

Contractor: – SETC

Technical solution

- Dramix Fibre Only
