

GLOBAL ENERGY – GLADSTONE

Fortescue Future Industries build the first of their new green energy production facilities in Gladstone with [Dramix](#)

This new 14,600m² facility is the first of many to be constructed around the world for manufacturing electrolysis for the production of Hydrogen. FFI and Hutchies needed a high quality flat floor for the mostly automated facility, and Dramix was the obvious choice.

Developer: – Fortescue Future Industries

Builders: – Hutchinson

Engineers: – Tungsten Structures

Premix Suppliers: – Boral Concrete

Contractor: – Top End Steel Fixing

Technical solution

- [Dramix](#) 4D 80/60BG at 20kg/m³

Benefits

- High quality jointless slabs
- Faster construction and less labour in a regional location
- Highly burnished flat floors
