

NTWA WAREHOUSE – BERRINBA

Dramix steel fibres are used on yet another Frasers Property project. CIP were awarded Frasers latest project at Berrinba for the NTAW (National Tyre and Wheel) warehouse. It's another very big warehouse in this very much Dramix steel fibre slab estate, and this time Frasers wanted a Jointless slab solution, so eliminating all of the saw-cuts. To do this Spencer Group Engineers specified our Dramix 4D 80/60BG steel fibres at a dosage rate of 20kg/m³, providing an excellent high-performing yet economical solution. Just another day for Neilsens supplying their top quality SFRC mix, with Pourtek tasked with placing the high quality burnished floors for the first time. A great outcome was achieved in pretty difficult conditions after very lengthy delays due to rain along with material and labour shortages.

Developer:- Frasers Property

Builders:- CIP Constructions

Engineers:- Spencer Group Engineering

Premix Suppliers:- Neilsens

Contractor:- Pourtek Concrete

Technical solution

- Dramix 4D 80/60BG at 20kg/m³
