

SEAMLESS COMBI SLABS AT HEATHWOOD HUB

Douglas Constructions are getting some fantastic external pavements poured by Bess Concrete at their latest project for MLA Holdings at Heathwood Hub. McVeigh designed the Seamless Dramix Combi Slabs to accommodate the heavier than usual loads in this facility, allowing them to remove all of the movement joints and saw-cuts, creating a far more durable and longer lasting pavement. Dramix Combi Slab utilises a combination of high-performance Dramix steel fibres with conventional top reinforcing mesh, utilising the benefits of both for the ultimate solution.

Builder: – Douglas Construction & Engineering
Developer: – MLA Holdings
Engineer: – McVeigh Consultants
Premix Supplier: – Holcim Concrete
Contractor: – Bess Concrete

Technical solution

- Dramix Combi Slab
