

SEAMLESS CONTAINER PAVEMENT AT ARCHERFIELD AIRPORT

When the latest heavy-duty container pavement was being designed for SCF Container Solutions at Archerfield Airport, it was quickly established that the very heavy axle loads of the reach stacker, along with the block stacking of containers, would quickly damage any joints or saw-cuts that would be required in a conventional pavement. Bess Concrete, Multi Span Australia, and McVeigh, all understood the benefits of completely removing those crucial areas by constructing it as a Seamless Dramix Combi Slab. And that's just the start of the benefits of this solution. The results are amazing.

Client: – SCF Container Solutions
Builder: – Multi Span Australia
Engineer: – McVeigh
Premix Supplier: – Holcim
Contractor: – Bess Concrete

Technical solution

- Dramix Combi Slab
