

WINSTONE WALLBOARDS CHRISTCHURCH

For joint free restrained slabs – Dramix Combi Slab continually proves to be the best solution.

When constructing large, jointless, restrained warehouse slabs, there are only two options. A conventionally reinforced slab with two layers of heavy mesh, or the much more economical Dramix Combi Slab solution utilising 4D Dramix fibres and a single layer of mesh.

Comsi Slab also proves an excellent option for external yard slabs, providing large joint-free bays that are economical to construct.

Technical solution

- 4D 65/60BG fibre + single layer mesh

Benefits

- Seamless 8000m2 internal floor slab with no Joints or Maintenance
- Higher load capacity – compared to mesh or PT slab of the same thickness
